

# FireEye + Office 365 = Secure Cloud Email

THREAT BRIEF

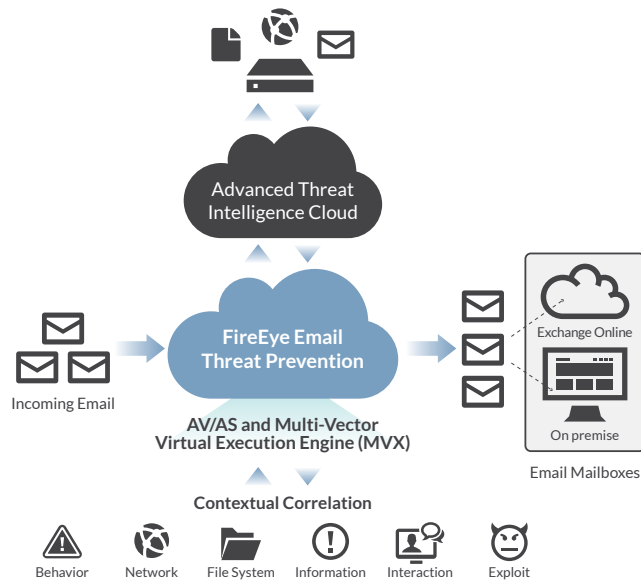

Now is a crucial time to enhance your email security as you move from on-premise Microsoft Exchange to Office 365. Because this transition to cloud comes amid growing concerns about email security, you have a unique opportunity to move your email to the cloud securely by considering the FireEye Email Threat Prevention Cloud (ETP). FireEye ETP Cloud provides a layer of superior email security to your Office 365 deployment, delivering highly effective email protection with the same ease of deployment that you'll get from Office 365.

Office 365 includes basic security at nominal cost, but today's targeted attacks require more robust email defense. When combined with Office 365 and Exchange Online, FireEye ETP provides a complete email security solution, detecting and blocking advanced persistent threats faster and more effectively than traditional email security solutions.

FireEye ETP Cloud will:

- Reduce the risk of significant business impacts caused by email-borne attacks
- Maximize operational efficiencies with contextual, actionable threat intelligence
- Deliver a flexible security platform that can be expanded to protect against blended, multi-vector attacks

Today's high-impact email threats are not delivered in annoying spam messages but rather hide in carefully designed spear-phishing campaigns and targeted attacks. End users click on seemingly innocuous email messages that can download malicious malware, steal credentials and more. These sophisticated email attacks make it easy for cyber criminals to breach your organization, putting corporate and customer assets at risk.

FireEye is recognized by security, IT and business professionals around the globe as the leader in cyber security. We have identified more zero-day attacks in the past year than all other security companies combined. Our threat intelligence is fueled by the most powerful cyber defense ecosystem in the world, correlating data from over 100,000 incident response hours, 11 million global sensors around the world and threat analytics from billions of events.

To find out more about FireEye ETP Cloud and how easily it integrates with Microsoft Office 365, please reach out to us at [www.fireeye.com/products/ex-email-security-products.html](http://www.fireeye.com/products/ex-email-security-products.html).
